interface between the target non-biological substrate and the target biological substrate, or a non-binding domain substantially lacks binding to a target biological substrate. (I) has cytostatic activity, and can be used as a Tie2 receptor antagonist. The methods and compositions of the present invention can be used in cell culture of fibroblasts, endothelial cells, seme cells, embryonic and newborn tissue cells and osteoblasts, in the preparation of biological arrays, in the enhancement of an interaction between biological materials, for coating implants for in vivo use, for coating donor transplant cells or tissues, for diagnostic and therapeutic interface, and for modulating Tie2 receptors in tumour angiogenesis. The present sequence is used in the exemplification of the

amino acids of the transmembrane region upstream of the depicted sequence, of influenza haemagajutinin (HA). The peptide may be used to compete with viral HA as the substrate of palmitylation, and therefore may be useful as an influenza HA palmitylation inhibitor. Such an inhibitor will inherefere with viral assembly, but not with palmitete biosynthesis (which is important for cellular metabolism and energy prodn.) and is therefore a potentially useful influenza treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polymer; blomaterial; conjugate; hydrogel; drug delivery; adhesive; sealant; tissue engineering; wound healing; scaffold; cell transplant; adhesion prevention.

combining two or more precursor components (e.g. polymer, protein or the biomarerial under conditions that allow polymerization of the biomarerial under conditions that allow polymerization of between a components. Polymerization occurs through self selective reaction between a strong nucleophile and a conjugated unsaturated bond or a hydrogels can be used in a variety of applications. They can be used to deliver therapeutic molecules to a subject, as adhesives or sealants (e.g. sealing air leaks on the lung), as tissue engineering and wound healing scaffolds, and as cell transplant devices. The biomaterials are post-traumatic adhesions A method of making polymeric biomaterials is described comprising

New biomaterial useful for medical treatment comprises an active or a binding group and has an ester or amide bond onto the active or binding

Disclosure; Page 66; 222pp; English.

The invention relates to a biomaterial comprising an active or a binding group and has an ester or amide bond onto the active or binding group. Also included is a biomaterial (II) formed from the cross-linking of at least uncluded is a components of formula D-Y-C(0) -(CH 2) n-S-(CH 2) cox-P', D-Y-C(0) -(CH 2) n-NH-(CH 2) 2-COX-P', D-Y-C(0) -(CH 2) n-NH-(CH 2) 2-COX-P', D-Y-C(0) -(CH 2) n-NH-(CH 2) n AAUUS 11)
AAUUS AA

conjugate addition reaction to form a precursor component and (a) crosslinking the uncoupled conjugated unsaturated groups in at least one
precursor component. D = active or binding group; Y = 0, NH or N; L =
linear or branched linker; X = 0 or N; P' = water-soluble or water swellable polymer containing conjugated unsaturated groups; U = product
of the addition of a nucleophile to an electrophile that is attached to
the water-soluble or water-swellable polymer; and n = 2 - 3. The
longaterials are useful for treating or preventing disease, disorder or
infection in a mammal e.g. human, for preventing adhesions, thrombosis or
cestenosis in a mammal and for delivering the active compound (preferably
protein or peptide) to a cell, tissue, organ, organ system or a body of a
mammal as adhesives or scalants, as tissue engineering and wound healing
scaffolds and as cell transplant devices. The bond of the biomaterial has
a half life of 1 hour - 1 year (preferably 1 ady - 9 months, especially 2
days - 2 months) in an aqueous solution at pH 7.4 and 37plusoC. Thus the
biomaterial releases the therapeutic compound over a clinically relevant time-frame. The present sequence is a consensus sequence for a peptide containing reactive thiol (cysteines) groups suitable for inclusion in Gaps ; 57.7%; Score 15; DB 5; Length 10; 100.0%; Pred. ```
The present invention provides novel trifluoromethyl sulfonyl and trifluoromethyl sulfonamido compounds which modulate the activity of protein phosphateses are involved in signal transduction, and the compounds can be used to treat diseases mediated by protein phosphatase action, including cancer, immune discorders such as anamala and immunodeficiency, diabetes, rheumatoid arthritis, and as neurodegenerative diseases, infections and osteoporosis. The present sequence comprises a consensus sequence of the protein phosphatase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Growth factor receptor-bound protein 7; Grb7; ligand; antagonist; cytostatic; cancer; phage display; tumour; metastasis; breast cancer; oesophageal cancer; kidney disorder; liver disorder; gonad disorder; breast disorder; cosophageal disorder; pancreatic disorder; proseste disorder; small intestine disorder; placental disorder; colon disorder; lung disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptide modulators of androgen receptor, useful for treating androgen -associated disorder, e.g. prostate cancer, particularly hormonally refractive prostate cancer, colon cancer, lung cancer, acne, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel peptide modulators of androgen receptor. The peptides of the invention are useful for treating androgen-associated disorders such as prostate cancer, particularly hormonally refractive prostate cancer, colon cancer, lung cancer, benign prostatic hypertrophy, acne, hirsutism, male pattern baldness, Stein-Leventhal syndrome, androgen insensitivity syndrome, infertility, endometrial cancer and X-linked spinal bulbar muscular atrophy. The present sequence
                                                                                                                                                                     Incre= "Linked to Xb-Y2; Where Xb is independently a direct bond or a peptidic structure comprising from about 1-25 amino acid residues and Y2 is -04, amino or monosubstituted or disubstituted amino"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to treatment or prophylaxis (W1) of a subject having a disorder characterised by abnormal interaction of Grb7 (Growth Eartor receptor-bound protein 7 and a Grb7 ligand, comprising a daministering to a subject in need of the treatment, a non-phosphorylated administering to a subject in need of the treatment, a non-phosphorylated peptide comprising a sequence (S1, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-Csc peptide comprising a sequence (S1, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-Csc of its functional equivalent, in an amount effective to inhibit the disorder. Also included are peptide antagonists/inhibitors of Grb7, uncleic acids encoding the antagonists, an expression vector comprising crb and a most cell transformed or transfected with the vector, screening (M2) a molecular library to identify a compound that inhibits interaction between Grb7 and a peptide antagonist and a phage display library comprising Grb7 and a peptide antagonist or prophylaxis or treatment of a subject having a disorder characterised by abnormal concernation of Grb7 and a Grb7 ligand, including breast or oesophageal cancer, primary tumour or metastasis, or disorders in kidney, liver, gonads, breast, oesophagus, pancreas, prostate, small intestine, concernation, ovary, testes and lung. The present sequence is a generic example of a Grb7 peptide antagonist of the invention
                                                                                                                                                                                                                                                                       Treatment or prophylaxis of a subject having a disorder characterized by abnormal interaction of \operatorname{Grb7} and a \operatorname{Grb7} ligand, involves administering to a non-phosphorylated peptide to a subject in need of the treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytostatic, cancer, phage display, tumour, metastasis, breast cancer, oesophageal cancer, kidney disorder, liver disorder, gonad disorder, breast disorder, oesophageal disorder, pancreatic disorder,

The invention relates to treatment or prophylaxis (M1) of a subject having a disorder characterised by abnormal interaction of Grb7 (Growth factor receptor-bound protein 7 and a Grb7 ligand, comprising to a subject in need of the treatment, a non-phosphorylated administering to a subject in need of the treatment, a non-phosphorylated comprising a sequence (S1, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-peptide comprising a sequence (S1, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-comprising a sequence (S1, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-comprising or the functional equivalent, in an amount effective to inhibit the compound that inhibits or nucleic acids encoding the antagonists, an expression vector comprising the nucleic acids encoding the antagonists, an expression vector comprising the nucleic acid, a host cell transformed or transfected with the vector, comprising confinence of the nucleic acid, a host cell transformed or transfected with the vector, interaction between Grb7 and a peptide antagonist and a phage display interaction of Grb7 and a Grb7 ligand, including breast or oesophageal cancer, primary tumour or metastasis, or disorders in kidney, liver, concert, primary tumour or metastasis, or disorders in kidney, liver, concert, primary tumour or metastasis, or disorders in kidney, liver, concert, primary tumour or metastasis, or disorders in kidney, liver, concert, primary colon, ovary, cestes and lung. The present sequence is a generic example of a Grb7 peptide antagonist of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô
                                                                                                                                                               Treatment or prophylaxis of a subject having a disorder characterized by abnormal interaction of Grb7 and a Grb7 ligand, involves administering to a non-phosphorylated peptide to a subject in need of the treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         totally synthetic affinity reagent; vinculin; dynein; enzyme; heterobifunctional binding fusion protein; glutathione S-transferase; cancer treatment; nerve cell activity; modulate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

AAR76827 defines a class of generic TSAR (Totally Synthetic Affinity Reagent) library peptides, which bind specifically to glutathione-Stransferase (GST) is a dimeric enzyme that conjugates glutathione to various other substrates, including products of tissue damage and carcinogens. Its role in the cell seems to be in detoxification. The TSAR are new and/or improved heterofunctional binding fusion proteins that have affinity for the ligand vinculin, and can be used to modulate the activity of the ligand (or its binding proteins), e.g. in bindedicine, cacalysis, pharmaceuticals, etc. Other TGARs can be designed to bind dynein and glutathione-transferase. Typical applications are: (i) inhibition of GST to treat cancers that produce high levels of this enzyme; (ii) altering mobility/attachment of malignant cells, modulating platelet release and blood clotting, for TSARs directed against vinculin; (iii) TSARs against dynein are used to modulate nerve cell activity, sperm motility, mobility of protozoa, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fibrin, fibrin-binding peptide, deep-vein thrombosis, pulmonary embolism, cardiogenic thrombosis, atherosclerosis; myocardial infarction; lupus; reperfusion ischemia; stroke, peritoneal adhesion; rheumatoid arthritis; septic arthritis, thrombotic thrombosytopenic purpuas, hypoxia; tumour; diabetic retinopathy; autoimmune disorder, inflammatory disorder.
                                                                                                                                                                                                                                                                                Identifying peptide(s) that bind specifically to dynain, vinculin or enzymes, eg. glutathione-S-transferase - by screening random peptide libraries, useful e.g. in immunoassays, affinity purification., tumour treatment, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Gaps

The present sequence represents a synthetic peptide which binds to fibrin. Fibrin-binding peptides of the invention are useful for the detection and treatment of deep-vein thrombosis, plumonary embolism, cardiogenic thrombosis, atheroscalerosis, myocardial infarction, reperfusion ischemia, stroke, peritoneal adhesions, rheumatoid arthritis, tumous, diabetic arthritis, thrombocic thrombocytopenic purpura, hypoxia, tumours, diabetic retinopathy, autoimmune and inflammatory disorders; and for imaging by e.g. MRI (magnetic resonance imaging), ultrasound, optical, sonoluminescence, photoacoustic or nuclear imaging techniques, and localizing fibrin containing thrombi or other fibrin specific pathophysiologies. They are also useful for the detection, isolation or purification of fibrin in or from a solution containing it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Insulin-like growth factor; IGF, IGF-1; IGF binding protein; IGFBP; hyperglycemic disorder; obesity-related disorder; neurological disorder; cardiac disorder; anabolic disorder; renal disorder; neuroprotection; immunological disorder; kidney regeneration; degenerative disorder; hypoxia, wound healing; cardiac regeneration; degenerative disorder; metabolic stress; growth hormone deficiency; diabetes; short stature; osteoporosis; obesity.

The invention relates to treatment or prophylaxis (M1) of a subject having a disorder characterised by abnormal interaction of Grb7 (Growth Eator receptor-bound protein 7 and a Grb7 ligand, comparising administering to a subject in need of the treatment, a non-phosphorylated administering to a subject in need of the treatment, a non-phosphorylated peptide comprising a sequence (S1, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-Crb of its functional equivalent, in an amount effective to inhibit the clisorder. Also included are peptide antagonists, an expression vector comprising consider acids encoding the artagonists, an expression vector comprising considered and a mount of the nucleic acid, a host cell transformed or transfered with the vector, screening (W2) a molecular library to identify a compound that inhibits increation between Grb7 and a peptide antagonist and a phage display increatment of a subject having a disorder characterised by abnormal conservation of Grb7 and a Grb7 ligand, including breast or oesophageal cancer, primary tumour or metastasis, or disorders in kinhey, liver, gonads, breast, oesophagus, pancreas, prostate, small intestine, colon, ovary, testes and lung. The present sequence is a generic example of a Grb7 peptide antagonist of the invention
                                                                                                                                                                                                                                                                                                                                                             Treatment or prophylaxis of a subject having a disorder characterized by abnormal interaction of Grb7 and a Grb7 ligand, involves administering to a non-phosphorylated peptide to a subject in need of the treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            50.0%; Score 13; DB 5; Length 10; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence was used to construct a peptide library for identification of peptides which inhibit the binding of insulin-like growth factor (IGF)—I to IGF binding proteins (IGFBP). IGF agonist peptides are used to increase serum and tissue levels of IGF-1 in mammals with hyperglycemic, obesity-related, neurological, cardiac, anabolic renal or immunological disorders. They may also be used to increase whole body, bone and muscle growth rate in normal and hypopituitary animals, to protect body weight and nitrogen loss during catabolic states, kidney regenerative disorders and promote neuroprotection or repair following CNS damage or injury, to treat hypoxia, to promote wound healing, for cardiac regeneration, to reverse cancer cachexia, to inhibit or cagneration, to respendent action of growth hormone context growth hormone activity onset diabetes and adult growth hormone activity onset diabetes and vot treat specific IGF deficiency, to treat maturity onset diabetes and/or to treat specific IGF deficiency. They may also be used to treat growth-hormone resistant short stature, growth hormone insensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated peptides used to increase serum and tissue levels of insulin-
like growth factor in those with hyperglycemic, obesity-related,
neurological, cardiac, anabolic, renal or immunological disorders.

```
A peptide useful for treating a IgB-mediated disease or disorder in a host e.g. allergic rhinitis, asthma, which competes with immunoglobulin E for binding to high affinity IgE receptor in an in vitro assay.
                                                                                                                                                                                                                                                   The present invention relates to a method for treating cartilage disorders. The method comprises contacting cartilage with an active agent disorders. The method comprises contacting cartilage with an active agent preference insulin-like growth factor (IGF-1) analog with a binding affinity preference for IGFBP-1, an IGF-1 analog with a binding affinity preference for IGFBP-1 over IGFBP-3, or a IGFBP displacer peptide that prevents the interaction of IGF with an IGFBP and does not bind to human IGF receptor. The method is useful for treating cartilage disorders (CD), including degenerative CD, articular CD such as rheumatoid arthritis and osteoarthritis. The present sequence
                                                                      Treating cartilage disorders including cartilage damage by injury or degenerative cartilagenous disorders, by contacting cartilage with insulin-like growth factor analog with altered affinity for IGF-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IgE receptor, immunoglobulin; FcepsilonRI; antagonist; phage display; protein co-ordinate data; IgE-mediated disease; allergic rhinitis; asthma; allergic asthma; allergic dermatitis; urticarid-angicedema; parastic infection; IgE myloma; immune-related disorder; inflammatory disorder; diabetes mellitus; reperfusion injury; stroke; IgE-mediated gastrointestinal inflammatory disease; burn; immune rejection of graft; myocardial infarction; atherosclerosis; acute lung injury; haemorrhagic shock; septic shock; acute tubular necrosis; endometriosis; degenerative joint disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  50.0%; Score 13; DB 5; Length 10; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to treatment or prophylaxis (MI) of a subject having a disorder characterised by abnormal interaction of Grb7 (Growth factor receptor-bound protein 7 and a Grb7 ligand, comprising disorder charactering to a subject in need of the treatment, a non-phosphorylated administering to a subject in need of the treatment, a non-phosphorylated peptide comprising a sequence (SI, Tyr-Ala-Asn, Tyr-Glu-Asn and Tyr-Asp-Asn) or its functional equivalent, in an amount effective to inhibit the disorder. Also included are peptide antagonists, an expression vector comprising the nucleic acid, a host cell transformed or transfected with the vector, creening (M2) a molecular library to identify a compound that inhibits interaction between Grb7 and a peptide antagonist and a phage display interaction between Grb7 and a peptide antagonist and a phage display interaction of Grb7 and a Grb7 ligand, including breast or ossophageal interaction of Grb7 and a Grb7 ligand, including breast or ossophageal cancer, primary tumour or metastasis, or disorders in kinhey, liver, gonads, breast, ossophagus pancreas, prostate, small intestine, generic example of a Grb7 peptide antagonist of the invention
                                                                                                                                                                                                                             Treatment or prophylaxis of a subject having a disorder characterized by abnormal interaction of Grb7 and a Grb7 ligand, involves administering to a non-phosphorylated peptide to a subject in need of the treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

The invention relates to a peptide which competes with immunoglobulin (Iq) E 134 comprising a sequence (S1), for binding the high affinity IgE receptor (FecepilonR1) in an in vitro assay and having a formula given in receptor (FecepilonR1) in an in vitro assay and having a formula given in the specification. Also included are a fusion protein comprising the peptide, a compound that mimics the three-dimensional surface structure of the peptide, a compound with a solvent accessible surface that mimics the solvent accessible surface that mimics the solvent accessible surface defined by the side of residues (R) for the solvent accessible surface for mimics the solvent accessible surface defined by the solvent accessible surface defined by the side of residues (R) for the solvent accessible surface for solvent accessible surface for solvent accessible surface for solvent accessible surface defined by the side of the mimics the coordinates of IgB134 a peptide with structural coordinates of IgB134 a peptide with structural coordinates of IgB134 residues (R). C) is useful for inhibiting the binding of IgB to high affinity IgE receptor. The peptide is useful for selecting a molecule which blocks the interaction of IgB with high affinity IgE receptor. The peptide is useful for selecting a molecule which blocks in the peptide is useful for treating of IgB mediated disease or disorder in a second processes such as IgE-dependent activation and degranulation of mast colls and basophils, as well as consequent release of inflammatory mediators such as Instamine. (C) is useful for treating an IgB mediated matching acceptor associated minimatory disorders, immune-release of uttercaria-angioedema, parasitic infection, IgE myeloma, immune-related disease of disorders, inflammatory stroke, mycoardial infection, and parting of the invention of the invention (or a library of peptides of the i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Herpes virus infection; detection; therapy; zinc-finger motif; antiviral.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Gaps

The invention relates to a method of detecting an agent for use in the treatment of herpes virus infection. The method comprises forming a herpes virus polypeptide/zinc complex, adding a test agent to the polypeptide/zinc complex, and detecting any change in the complex. The invention also relates to the use of known agents, such as 2,2'-dithiobisbenzamide (DIBA) and azodicarbonanide (ADA), and unknown agents for the manufacture of a medicament for the treatment of herpes virus infections. The method is useful for detecting agents for use in the treatment of herpes virus infection. The present sequence is Gammaherpes thus subfamily zinc-finger motif of herpes virus 1863 functional homologue. (Updated on 07-AUG-2003 to correct OS field.) (Updated on 29-AUG-2003 to strandardise OS field)

                                                                                                   The invention relates to novel peptides that can antagonise the interaction of insulin-like growth hormone 1 (IGF-1). The peptides are useful for treating disorders such as cancer, diabetic complication accempated by IGF-1, e.g. diabetic retinopathy or nephropathy, acromegaly, age-related macular degeneration, ischemic injury or trauma. Other disorders that can be treated by the peptide include restenosis or asthma. This sequence represents a peptide relating to the IGF antagonist peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        label= Cys, OTHER
note= "OTHER = beta-mercaptopropionic acid or nothing"
New peptides antagonizing insulin-like growth factor (IGF), useful for treating disorder such as cancer, diabetic complication exacerbated by IGF-1, acromegaly, age-related macular degeneration, ischemic injury, trauma, asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cyclohexylalanine

The invention relates to the use of substances with oxytocin activity for the preparation of a pharmaceutical composition for the treatment of cancer in situ and cervicitis. The cancer in situ and cervicitis include diseases in vagina and cervix originating from infections as well as inflammations. The cancer in situ is related to cervix and also includes precancerous disease states, squamous cell carcinoma and koilocytosis due to the herpes virus. The present sequence is a peptide with oxytocin

XX TIOCTEASING Servum and Lissue levels of biologically active insulin-like PT growth factor (IGF)-I in a mammal for treating e.g. renal disorder, by administering IGF peptide.
```

Example 7; SEQ ID NO 35; 117pp; English.

The invention relates to a method for increasing serum and tissue levels of biologically active insulin-like growth factor I (IGF-I) in a mammal comprising administering a growth hormone, a growth hormone releasing peptide, a growth hormone releasing hormone, a growth hormone binding secretagogue, a growth hormone in combination with growth hormone binding protein, an IGF in combination with an IGF binding protein, an IGF in combination with an IGF binding protein, and glucose levels in a mammal. The method is useful for increasing serum and tissue levels of biologically active IGF-I in a mammal for treating hyperglycaemic, obesity-related, neurological, cardiac, anabolic, repal or immunological disorders. This sequence represents a peptide used in the method of the invention.

US-09-248 519-1.

Sequence 21, Application US/09284819

Patent No. 6365712

GENERAL INFORMATION:
APPLICANT: Kelly, Kathleen
APPLICANT: Kelly, Kathleen
APPLICANT: Rely, Kathleen
APPLICANT: The Government of the United States of America
APPLICANT: Department of Health and Human Services
TITLE OF INVENTION: Methods and Compositions for Inhibiting Inflammation
TITLE OF INVENTION: Methods and Compositions for Inhibiting Inflammation
TITLE OF INVENTION: Methods and Compositions for Inhibiting Inflammation
TITLE OF INVENTION: Wombar: US/09/284,819
CURRENT APPLICATION NUMBER: US 60/027,871

FARLIER APPLICATION NUMBER: US 60/027,871

EARLIER PILING DATE: 1999-10-25

NUMBER OF SEQ ID NOS: 21

SEQ ID NO 21

LENGTH: 12

CORTWARE: PatentIn Ver. 2.1

LENGTH: 12

CORGANISM: Artificial Sequence
                                                                                                                                                                                                                                      Sequence

Sequence 157, Application US/10158847

Sequence 157, Application US/10158847

Patent No. 6592865

GENERAL INFORMATION:

TILLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity

TILLE OF INVENTION: MARBER: US/10/158,847

CURRENT APPLICATION NUMBER: US/10/158,847

CURRENT FILING DATE: 2002-06-03

PRIOR APPLICATION NUMBER: 60/295,004

PRIOR APPLICATION NUMBER: 60/295,004

PRIOR SPILOR APPLICATION NUMBER: 60/295,004

NUMBER OF SEQ ID NOS: 158

SOFTWARE: PARTON NOS: 158

SOFTWARE: PARTON NOS: 158

LENGTH: 16

TYPE: RT

OCCANION: (1).-(3)

OTHER INFORMATION: X equals any amino acid

PERTURE:

NAME/KEY: MISC_FEATURE

LOCATION: (5).-(12)

OTHER INFORMATION: X equals any amino acid

APPLICANT: BYANS, Ronald M
APPLICANT: BYANS, RONALD
TITLE OF INVENTION: COMPOUNDS USEFUL FOR THE MODULATION OF PROCESSES
TITLE OF INVENTION: MEDIATED BY NUCLEAR HORWONE RECEPTORS, METHODS FOR THE TITLE OF INVENTION: IDENTIFICATION AND USE OF SUCH COMPOUNDS
TITLE OF INVENTION: 1997-05-01
CURRENT APPLICATION NUMBER: US/08/846,881A
CURRENT FILING DATE: 1997-05-01
NUMBER OF SEQ ID NOS: 2
SOFTWARE: PATENTIN Ver. 2.1
SEQ ID NO 1
                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TYPE: PRT ORGANISM: Artificial Sequence ORGANISM: Artificial Sequence: Highly OTHER INFORMATION: Description of Artificial Sequence: Highly OTHER INFORMATION: Conserved Amino Acids of the DNA Binding Domains OTHER INFORMATION: of the steroid/thyroid superfamily of receptors. NAME/KEY: VARIANI.

Fatent No. 6300488
GENERAL INFORMATION:
APPLICANT: Subr. Steven T.
TILLE OF INVENTION: Modified Lepidopteran Receptors
TILLE OF INVENTION: and Hybrid Multi-Functional Proteins for Use in Transcription
TILLE OF INVENTION: and Transgene Expression Regulation
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Gray Cary Ware & Freidenrich
STREET: 4365 Executive Drive, Suite 1600
GTHY: San Diego
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô

Sequence 1. Application US/08877966B
Sequence 1. Application US/08877966B
Patent No. 6458926
GENERAL INFORMATION:
APPLICANT: Evans, Forman arry M.
APPLICANT: Forman, Barry M.
APPLICANT: Unescono, Kazuhiko
TITLE OF INVENTION: ALLOSTERIC CONTROL OF NUCLEAR HORMONE RECEPTORS NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: Gray Cary Ware & Freidenrich
STREET: 4365 Executive Drive, Suite 1600
CITY: San Diego
STREET: A.
ION: (28)...(38)
INFORMATION: each Xaa designates non-conserved amino acids;
INFORMATION: 37-38 are optional residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      COUNTRI.

Application US/09253316

Patent No. 6395890

GENERAL INFORMATION:
APPLICANT: Sheppers, Stephen R.
TITLE OF INVENTION: CONNECTIVE TISSUE GROWTH FACTOR HOMOLOGS
FILE REFERENCE: 97-75
CURRENT APPLICATION NUMBER: US/09/253,316
CURRENT FILING DATE: 1999-02-19

BARLIER PILING DATE: 1998-02-20

NUMBER OF SEQ ID NOS: 34

SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FEATURE: OTHER INFORMATION: connective tissue growth factor family motif

Sequence 2, Application US/08291060B

Sequence 2, Application US/08291060B

Patent No. 5728543

GENERAL INFORMATION:
APPLICANT: Descend, Michael
APPLICANT: Marquardt, Rudiger
APPLICANT: Marquardt, Rudiger
APPLICANT: Marquardt, Rudiger
APPLICANT: Marquardt, Rudiger
TITLE OF INVENTION: An Enzymatic Process for the
TITLE OF INVENTION: Conversion of Preproinsulins Into Insulins
NUMBER OF SEQUENCES:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &
CITY: Washington
STREET: 1300 I Street, N.W.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

MEDIUM TYPE: Floppy disk

COMPUTER IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/487,826B

FLING DATE: 10-EP-1993

CLASSIFICATION: 435

ATTORNEY/AGBNT INFORMATION:

NAME: Israelsen. Ned

REGISTRATION NUMBER: NIH121.001CP1

TELEPANCE/DOCKET NUMBER: NIH121.001CP1

TELEPANCE/OCKET NUMBER: 35-856

TELEPANCE/OCKET NUMBER: 135-856

TELEPANCE: (619) 235-0176

INFORMATION FOR SEQ ID NO: 26:

SEQUENCE CHARACTERISTICS:

LENGTH: 271 amino acids

TYPE: amino acid

TYPE: amino acid

TYPE: Angle
REFERENCE/DOCKET NUMBER: NIH121.001CP1
